LAB 1

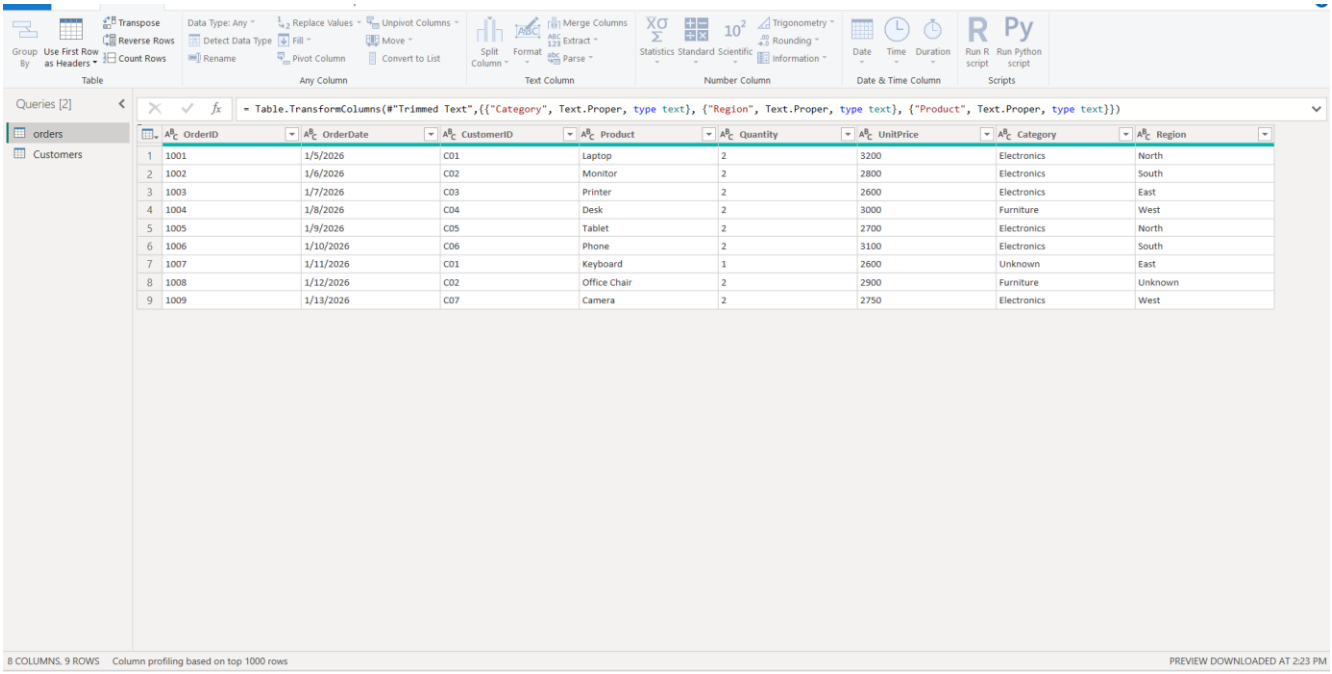

Q1: Both orders.csv and customers.xlsx were successfully imported into Power Query, and their original row and column counts were verified.

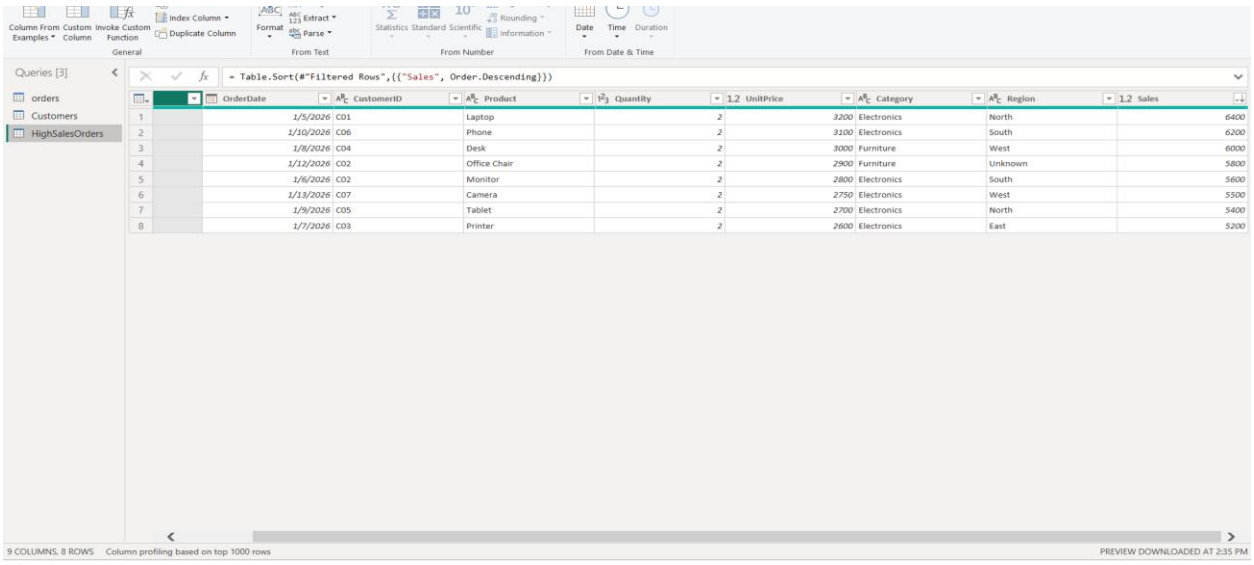

Q2: Duplicate and missing-price records were removed, missing values were filled as required, and Category and Region text was standardized.

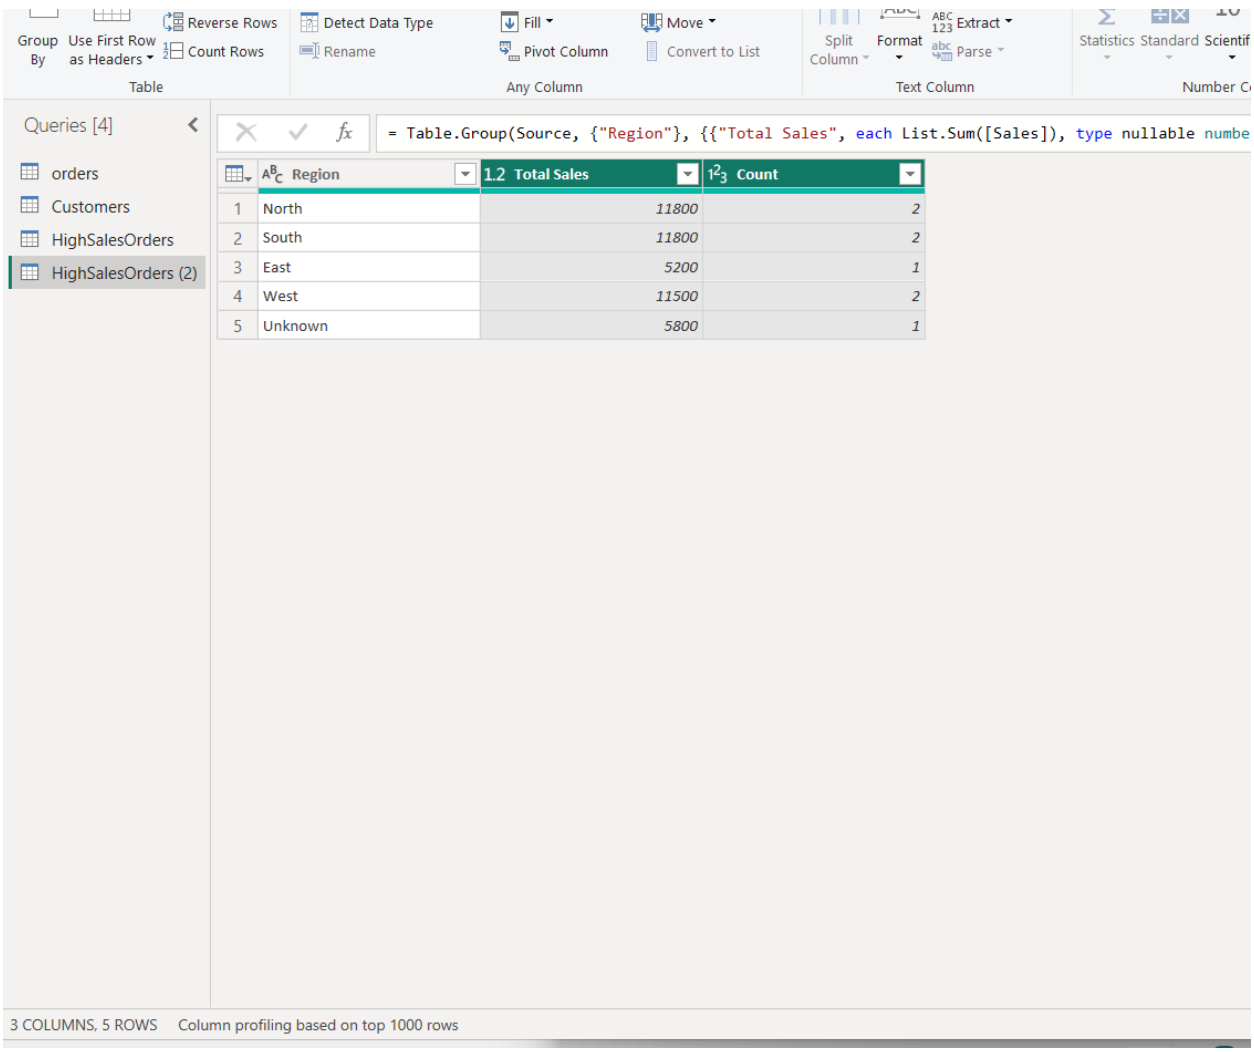

Also 9 Rows are present.

The HighSalesOrders reference query was filtered to Sales ≥ 5,000 and sorted in descending order.

GroupBy : to calculate Total Sales and Order Count by Region.

Q4: **Connect the cleaned Orders table to the left input of a Joiner node.**

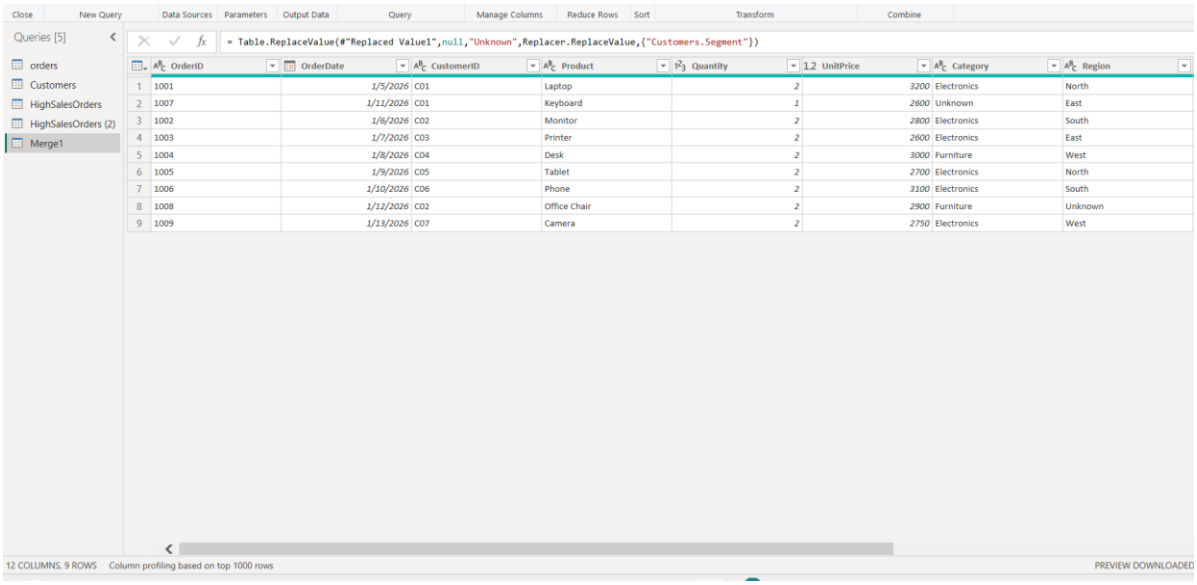

Connect the cleaned Customers table to the right input.

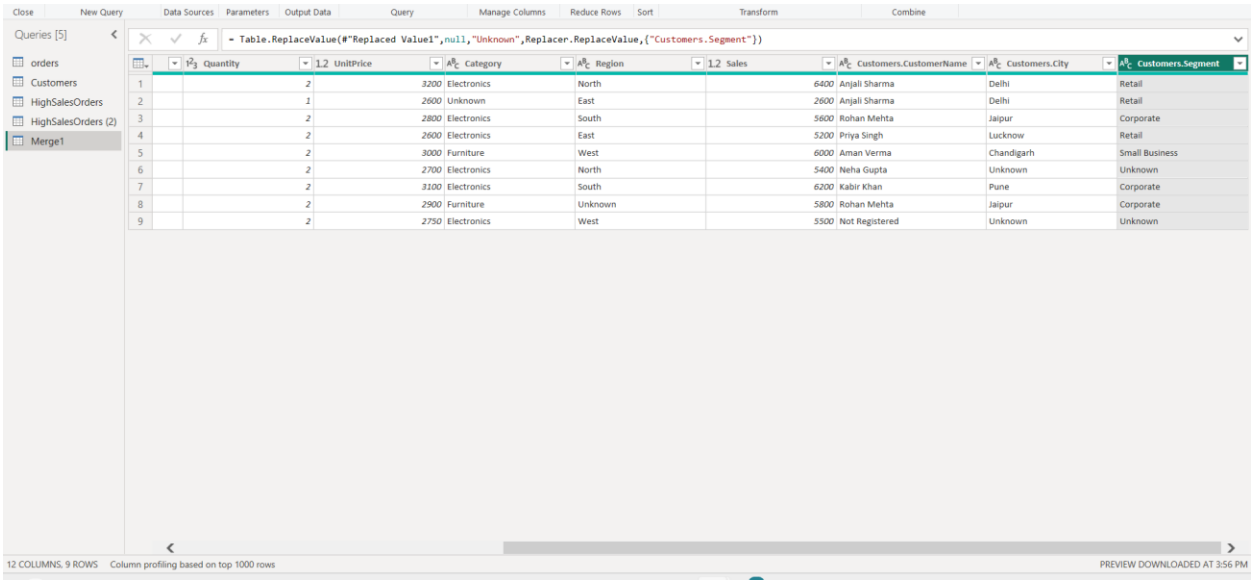

Configure CustomerID as the matching column.

Select a Left Outer Join.

Execute the node and inspect the output.

Use a Missing Value or String Manipulation node to fill unmatched customer details for C07.
